

What is claimed is:

1. A mannequin form comprising:

a first section of a selected material, said selected material being resistant to damage from a stress selected from the group consisting of heating, cutting, dying, and any combinations thereof; and

a second section of said selected material, said second section being releasably secured to said first section to define a predetermined three-dimensional shape, wherein said first section abuts said second section to define a first smooth mating line.

2. The mannequin form of claim 1, wherein said first section comprises a cavity for receiving a portion of another first section during storage.

3. The mannequin form of claim 1, further comprising a third section integrally formed with said first section.

4. The mannequin form of claim 1, further comprising a third section releasably secured to said first section, wherein said first section abuts said third section to define a second smooth mating line.

5. The mannequin form of claim 4, further comprising at least one fourth section secured between said first and second sections.

6. The mannequin form of claim 5, wherein at least one of said first through fourth sections comprise a cavity for receiving a portion of another of said first through fourth sections during storage.

7. The mannequin form of claim 1, further comprising at least one fourth section secured between said first and second sections.

8. The mannequin form of claim 1, wherein said selected material comprises metal.

9. The mannequin form of claim 1, wherein said metal is selected from the group consisting of a polymeric material, steel, aluminum, alloys of steel, alloys of aluminum, and any combinations thereof.

10. The mannequin form of claim 1, said predetermined three-dimensional shape is a shape selected from the group consisting of an upper torso, a leg, a lower torso, a head, an arm, a hand, a foot, and any combinations thereof.

11. The mannequin form of claim 1, wherein said first and second sections has thermal properties sufficient to resist and/or mitigate formation of condensation when steam is applied.

12. A mannequin form comprising:

a first metallic section;

a second metallic section; and

a fourth metallic section, wherein said first, second, and fourth metallic sections are magnetically securable to one another to define a smooth outer shape.

13. The mannequin form of claim 12, wherein said smooth outer shape is a shape selected from the group consisting of an upper torso, a leg, a lower torso, a head, an arm, a hand, a foot, and any combinations thereof.

14. The mannequin form of claim 12, wherein said first metallic section comprises a cavity for receiving a portion of another first metallic section during storage.

15. The mannequin form of claim 12, further comprising at least one metallic third section integrally formed with said first section.

16. The mannequin form of claim 12, further comprising at least one third metallic section magnetically secured to said first section.

17. The mannequin form of claim 16, wherein said at least one third metallic section comprises a breast region or a gluteus region.

18. The mannequin form of claim 16, wherein at least one of said first through fourth metallic sections comprise a cavity for receiving a portion of another of said first through fourth metallic sections during storage.

19. The mannequin form of claim 12, wherein said first, second, and third sections have thermal properties sufficient to resist and/or mitigate formation of condensation when steam is applied.
